Professional Summary

Computer Science student and aspiring Software Engineer with hands-on experience developing scalable full-stack applications using Next.js, React, Node.js, NestJS, and MongoDB. Strong foundation in software engineering principles, RESTful API design, and asynchronous microservices. Passionate about system design, backend engineering, and integrating artificial intelligence, machine learning, and computer vision models into real-world applications.

Technical Skills

Programming Languages: JavaScript, TypeScript, Python, Java, PHP, SQL

Frontend: React, Next.js, Tailwind CSS, HTML5

Backend: Node.js, Express.js, NestJS, REST APIs, JWT Authentication, OAuth, Socket.io

Databases: MongoDB, MySQL, Prisma ORM

Tools & Platforms: Git, GitHub, Docker, Postman, Vercel, Linux, Figma

Projects

Real-Time ISO Container Identification System (Python, YOLO26, PaddleOCR, FastAPI, Redis, Docker)

- Built an automated intelligent system capable of detecting and recognizing ISO 6346 container identification codes directly from real-time video streams.
- Implemented a YOLO26 object detection model to locate and crop text regions, paired with an image preprocessing pipeline and PaddleOCR to accurately extract text in both horizontal and vertical orientations.
- Improved system scalability and real-time performance by architecting an asynchronous microservices backend using Redis message queues and FastAPI.

AI PDF Chat Application (Next.js, MongoDB, AI)

- Built a Retrieval-Augmented Generation (RAG) application that allows users to interact with uploaded PDF documents using AI.
- Implemented vector embeddings, semantic search, and document chunking to generate precise, context-aware responses.
- Improved overall scalability through asynchronous document indexing and background processing.

Language Learning Platform (React Native, Expo, Stream Video/Chat SDK)

- Built a mobile app for live language practice using React Native and Expo.
- Integrated Stream Video/Chat SDK for real-time communication with an AI teacher (video and messaging).
- Designed a smooth and engaging UX with React Native Reanimated, including animations and interactive feedback.

Cocktails Landing Page (Next.js, GSAP)

- Built a visually engaging and fully responsive landing page using Next.js and GSAP for advanced animations and smooth page transitions.
- Implemented scroll-based animations, interactive UI elements, and motion effects to enhance user experience and visual storytelling.
- Focused on performance optimization and clean component structure for maintainability and fast load times.

Relevant Coursework

Data Structures and Algorithms, Database Systems, Operating Systems, Software Engineering, Object-Oriented Programming, Web Development.

Education

Bachelor's Degree in Computer Science

University of M'Hamed Bougara Boumerdes (UMBB)

Graduation year: 2026
